

POLISHING PASTE FOR ACRYLICS

(Acrylglas Polier & Repair Paste)

Wax-free, water-soluble special polishing paste for acrylic glass and other polishable hard plastics or plastic surfaces.

With special polishing bodies adapted for plastics.
Easy to spread. Saves time and work.

How to use “polishing paste for acrylics”

Start by cleaning the surface to be treated thoroughly with water & a wetting agent, like our Intensive-Plastic-Cleaner (KIR) and dry with equal care.

1. Slight scratches can be polished away without previous sanding. To this end apply a rope of paste about 5 cm long (enough to cover an area of a palm), spread with our soft special-purpose cloth for plastic treatment and polish with circling movements for 3 to 5 minutes while exerting pressure.

2. Deep scratches are removed with waterproof abrasives paper of grit 320, 400, 600 and 1000 (successively). Add water while moving the paper always in the same direction (no circles !). Before changing from one grit to the next, clean the surface, turn it clockwise through 45°, and enlarge the treatment area slightly every time you do so. Sanding being completed clean once more as above and then polish in the described manner by point 1.

Subsequently to polishing rinse the treated surface with warm water. After-treatment with our Antistatic Plastic Cleaner (AKU) is recommended.
