

ANTISTATIC PLASTIC CARE & CLEANING MATERIAL

(Antistatischer Kunststoff-Reiniger + Pfleger, AKU)

Plastic surfaces and articles need special care and cleaning treatment. Nevertheless, plastics are often cleaned with traditional agents. For plastic material this is more or less makeshift, especially because of the problems of electrostatic charges.

Over and above normal cleaning, this generates an acute need for a product that also provides maintenance. AKU has been designed to meet this large and ever growing range of problems. The development is backed by decades of experience of Röhm GmbH, having a worldwide activity in the plastic sector.

For all plastics and surfaces made from or coated by plastic, e.g. household appliances and furniture, telephones, computers, TV-sets and many more.
